

**Dr Suzi Bond** is a Visiting Fellow at the ANU's Fenner School of Environment and Society who conducts research on the butterflies of the ACT, and also works on biodiversity accounting at the ABS. Her research is driven by a fascination for our local butterfly fauna and a desire to better understand their populations and ecology. Suzi has contributed to various projects across Australia, involving field work on birds, orchids, mammals and reptiles in a variety of habitats, and she completed her PhD on bird breeding success in agricultural landscapes of south-eastern Australia.

**Steve Holliday** has had a lifelong fascination with the natural world. While butterflies were always a part of this, his interest increased after moving to Canberra in 2000, and finding the diversity of species in his Ainslie garden (45 species so far) and in the adjacent Mount Ainslie Nature Reserve. Steve is employed part-time by the Fenner School of Environment and Society at ANU and works on the Mulligans Flat/Goorooyarroo project where he helps with reptile, bird and vegetation surveys, amongst other things. He has travelled widely in Australia in search of birds, butterflies and other wildlife, as well as various places overseas.

**John Stein** moved from Sydney in the late 1970s to study forest science at the ANU. He has since called Canberra home after meeting his wife Janet as a student and raising two children. John and Janet have both worked at CSIRO and the ANU as landscape ecologists specialising in modelling and spatial analysis. They are passionate about the natural world and its conservation.

FIELD GUIDE TO THE *Butterflies* of the Australian Capital Territory
